

Wrangler 1710/2010 AB/AE

17, 20-in Automatic Scrubbers

Feature

Benefit

Debris Filtration

This Wrangler features a recovery tank debris filter which collects small items (missed by a thorough floor sweeping) from the floor while scrubbing. This feature keeps small impediments from clogging or damaging the recovery tank.

Ergonomic Handle Controls

The ergonomic handles provide increased control while reducing operator fatigue.

Option Key Switch

A key switch option allows a certain degree of security when the machine is left in areas where unauthorized use is possible.

Simplified Pad Changes

To simplify pad changing, a foot latch at the front of the machine allows the body to tilt up and back. This also provides easy access to the batteries and all internal components.

Long-Running Batteries

Two 12V 115 AH batteries power the vacuum and brush motors on the cordless models. The PROeye battery fluid indicator lets the operator easily monitor when a battery needs water. Maintenance-free batteries are available.

Tough, Durable Body

Rotocast polyethylene body is dent-resistant and durable, backed by a 10-year warranty.

Curved Squeegee

The curved squeegee, now standard on the Wrangler 1710/2010, swings wide on turns to recover all solution.

On-Board Battery Charger

Standard on all NSS Wranglers, the on-board battery charger assures convenient and consistent recharging anywhere an outlet is available.

Large Tanks

Wrangler compacts feature a 10-gallon solution and a 10-gallon recovery tank, which allows room for foam, helping protect the vacuum motor from moisture.

Extreme Maneuverability

Two 8 in rear wheels and swivel front casters make the Wrangler 1710/2010 extremely maneuverable.
